

Approved Contractor Application

This document indicates the company listed below is interested in participating in the Benton REA rebate programs and intends to perform the program requirements on all projects that are submitted for Benton REA rebates. A major aspect of those requirements is to ensure the work will meet BPA weatherization specifications (*revised October 2016*).

Before work begins on the residence, the contractor will provide Benton REA, a completed Rebate Application. Benton REA will inspect the home to confirm the anticipated incentive. Promptly after completing the job, the contractor is required to notify Benton REA so that a post installation inspection may be done. You are responsible for submitting a copy of the customer invoice and, if rebates are to be paid to the contractor, they will appear as a credit against the project cost on that invoice.
